

Thanks for raising this.

I will put climate change into the top ten priorities of the council and expect the council to lead by example .

Planning will be a big issue obtaining eco three in rural areas is difficult without mains gas and I think we need to look at wood burners and sustainable local woods supplying them.

We also need to look at NIMBYism and market items such as windturbines and hydro with more vigour or even give council tax relief in areas where they have them?

Broadband in rural areas is a key to reducing our rural carbon emmisions and I know the infrastructure issues are great however we need to look at other methods and trialing them e.g home satalite broadband squarials

Education is a major key and we need to liase with schools to ensure that children are leading recycling for the future .I am disturbed how many kids ask for bags in the shops and how much litter they create.
